

Benefits:

- One to two or more years of uses
- For grazing or harvest
- Very low costs per cut, as no annual sowing is necessary
- Dense and tread-resistant turf
- Low site requirements
- When red clover declines in the second year, white clover contributes more to the stock
- Highly humus-enriching, optimal for carbon farming and regenerative cultivation methods

Blend details:

Composition of blend Weight %	23 % Bastardweidelgras
	32 % Perennial ryegrass
	18 % Red clover
	12 % White clover
	15 % Italian ryegrass

without cruciferae, with legumes, With grass, winter-hardy

..Diese Mischung erfüllt die Anforderungen der EU-Verordnung 2018/848 und ist für den ökologischen Landbau geeignet.

Usage:

Green manure
Biogas- and fodder production
Humus formation
Ground water protection / Nitrogen conservation
Protection against erosion
Nitrogen fixation

Crop rotation suitability:

+ suitable / ++ strongly recommended

Maize	++
Cereals	++
Oilseed rape	++
Sugar beets	+
Potatoes	
Intensive crops	
Legumes	

Agronomic features:

bad / early / short / low good / late / long / high / tall

Weed suppression	6
Protection against erosion	9
Ground water protection / Nitrogen conservation	7
Humus formation	9
Cold- and frost resistance	8
Drought tolerance	8

Type of root	Tuft root
Rooting depth	350 cm

Cultivation recommendations:

V-Max® Öko

KLEEGRAS ÖKO

Clover-rygrass-blend for perennial use

Recommended sowing rate	40 kg/ha
Sowing depth	1 - 2 cm
Sowing period	August bis Mitte September
Fertilization	An early fertilization to promote the initial development is recommended.
Sowing method	Drill sowing ensure high crop emergences
Harvest	As green forage with loader wagon, for silage use with loader wagon or with chopper after prewilting phase
Harvest date	April until late September
