

Spring forage pea

RUBIN

For summer crop cultivation

Benefits:

- RUBIN is a green forage pea variety which combines rapid development and good ground cover with high green- and drymatter yield
- The variety is a Normal-Leave Type with good stiffness and good competition against weeds
- Rapid development in the beginning with good weed suppression
- Strong and medium tall single plants with medium flowering time
- Can be used as a pure crop for green fodder and silage and as a valuable partner in forage and greening blends

Variety characteristics: (Officially confirmed or respectively in line with Bundessortenamt)

	bad / early / short / low	good / late / long / high / tall
Initial mass formation		6
Tendency to flower		5
Dry matter yield		7

Spring forage pea

RUBIN

For summer crop cultivation

Usage:

Humus formation
Protection against erosion
Nitrogen fixation
Green manure
Biogas- and fodder production

Crop rotation suitability:

+ suitable / ++ strongly recommended

Maize	++
Cereals	++
Oilseed rape	++
Sugar beets	+
Potatoes	+
Intensive crops	+

Agronomic features:

bad / early / short / low good / late / long / high / tall

Weed suppression	6
Protection against erosion	5
Humus formation	6

Cultivation recommendations:

Recommended sowing rate	Pure crop: 80-100 germ. Koe / m ²
Sowing depth	4-6 cm, depending on soil type
Sowing period	From the beginning of April, wait for optimal soil condition
Fertilization	P, K and micronutrients if necessary No Nitrogen fertilization needed
Crop protection	Pre- and post-emergence herbicide applications possible
