

Field bean

# ADLON

Small-grained for use as cover crop

## Benefits:

---

- Small-grained field bean variety for cover crop cultivation
- Seeding is possible together with other species
- Lower sowing density (kg / ha) due to low thousand grain weight
- **ADLON** has a strong vegetative growth with pronounced leaf apparatus
- Provides additional nitrogen by binding atmospheric nitrogen
- In spite of small granularity, strong tap root system for intensive soil rooting
- Increases the standability as a partner in grain-leguminous-blends for whole crop silage and is also suitable for seeding in winter oilseed rape
