

Low requirerments to location and sowing periode

Benefits:

- Quick initial development for a strong populations, even during short growing seasons and by late sowing dates
- **AKIRO** is highly competitive against weeds
- Valuable organic mass binds nutrients, promotes the humus formation and protects against erosion
- Stores nutrients during winter and this protects the groundwater
- Intensive rooting improves the water- and air balance of the soil and activates the soil life

Variety characteristics: (Officially confirmed or respectively in line with Bundessortenamt)

	bad / early / short / low	good / late / long / high / tall
Initial mass formation		7
Tendency to flower		6
Stiffness		6

Low requirerments to location and sowing periode

Usage:

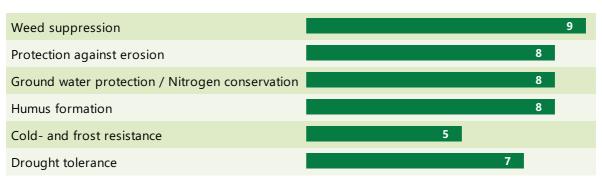

Green manure Ground water protection / Nitrogen conservation Mulch sowing Humus formation Protection against erosion Biofumigation

Crop rotation suitability:

	+ suitable / + + strongly recommended
Maize	++
Cereals	++
Oilseed rape	+
Sugar beets	
Potatoes	+
Intensive crops	+
Legumes	++

Agronomic features:

bad / early / short / low good / late / long / high / tall

Type of root	Tap root
Rooting depth	180 cm

Cultivation recommendations:

Recommended sowing rate	18 - 25 kg/ha
Sowing depth	2 - 3 cm
Sowing period	Early August to early September - depending on location!
Fertilization	40 - 60 kg N/ha
Crop protection	Usually there is no plant protection required.
Sowing method	In order to gain a fast and even development of the oil radish plants, drilling after careful soil preparation is recommended.
