

# ANGUS

- Beet Cyst Nematode control on top level, more than 90 % reduction of *Heterodera schachtii* (resistance level 1) and effective reduction of Corn Root Knot Nematodes (*Meloidogyne chitwoodi*)
- Multi-resistance: key for effective reduction of various nematodes and diseases
- The quick ground coverage from **ANGUS** suppresses weeds and volunteer plants
- Fast and healthy initial development adds up to organic matter and supports soil fertility
- Deep and thorough rooting breaks up soil compaction and enhances soil holding capacities

	bad / early / short / low	good / late / long / high / tall
Resistance against <i>Heterodera schachtii</i>	Resistance level 1	
Initial mass formation	7	
Tendency to flower	4	
Stiffness	7

## Multi-resistant oil radish

# ANGUS

The new generation of power

### Usage:

Multi-resistant  
Reduction of Beet Cyst Nematodes  
Reduction of Tobacco Rattle Virus  
Green manure  
Ground water protection / Nitrogen conservation  
Mulch sowing  
Humus formation  
Protection against erosion  
Biofumigation

### Crop rotation suitability:

+ suitable / ++ strongly recommended

Maize	++
Cereals	++
Oilseed rape	+
Sugar beets	++
Potatoes	++
Intensive crops	++
Legumes	++

### Agronomic features:

bad / early / short / low      good / late / long / high / tall

Weed suppression	9
Protection against erosion	8
Ground water protection / Nitrogen conservation	8
Humus formation	8
Cold- and frost resistance	5
Drought tolerance	7

Type of root	Tap root
Rooting depth	180 cm

### Cultivation recommendations:

Recommended sowing rate	25 - 30 kg/ha
Sowing depth	2 - 3 cm
Sowing period	July till end August. In vegetable growing from May - it takes 6 - 8 weeks of vegetation in order to get a reduction.
Fertilization	40 - 60 kg N/ha
Crop protection	Usually there is no plant protection required.
Sowing method	In order to gain a fast and even development of the oil radish plants, drilling after careful soil preparation is recommended.
