

crimson clover

# BOLSENA

for nitrogen enrichment and feed use

## Benefits:

---

- binds soil and air nitrogen
- ideal for feed mixes (for example with oats or ryegrass)
- tasty and high in protein
- Its biomass and root system promote biological activity and soil fertility
- very resistant to nematodes and diseases

crimson clover

# BOLSENA

for nitrogen enrichment and feed use

## Usage:

Green manure  
Biogas- and fodder production  
Nitrogen fixation  
Humus formation  
Protection against erosion

## Crop rotation suitability:

+ suitable / ++ strongly recommended

Maize	++
Cereals	++
Oilseed rape	+
Sugar beets	++
Potatoes	
Intensive crops	
Legumes	

## Agronomic features:

bad / early / short / low      good / late / long / high / tall

Weed suppression	3
Protection against erosion	5
Ground water protection / Nitrogen conservation	3
Humus formation	7
Cold- and frost resistance	7
Drought tolerance	5
Type of root	Tap root
Rooting depth	70 cm

## Cultivation recommendations:

Recommended sowing rate	15 - 20 kg/ha
Sowing depth	1 - 2 cm
Sowing period	Early April until late September - consider location!
Crop protection	Usually there is no plant protection required
Sowing method	Drill seeds in a dry, finely crumbled seedbed
