

Nematode resistant White mustard

CLINT

Convincing with outstanding initial mass formation

Benefits:

- **CLINT** stimulates the Beet Cyst Nematodes to hatch and thus reduces the harmful population
- Notable mass growth from the emergence to the flowering
- Due to rapid initial development and late flowering, particularly flexible in sowing time
- Safe freezing off allows trouble-free mulch sowing of the following fruit
- Leafy growth and intensive root system increase the amount of organic matter used to promote soil life

Variety characteristics: (Officially confirmed or respectively in line with Bundessortenamt)

	bad / early / short / low	good / late / long / high / tall
Resistance against <i>Heterodera schachtii</i>	Resistance level 2	
Initial mass formation	7	
Tendency to flower	3	
Stiffness	7

Nematode resistant White mustard

CLINT

Convincing with outstanding initial mass formation

Usage:

Reduction of Beet Cyst Nematodes
Green manure
Ground water protection / Nitrogen conservation
Mulch sowing
Humus formation
Protection against erosion

Crop rotation suitability:

+ suitable / ++ strongly recommended

Maize	++
Cereals	++
Oilseed rape	
Sugar beets	++
Potatoes	
Intensive crops	
Legumes	++

Agronomic features:

bad / early / short / low good / late / long / high / tall

Weed suppression	8
Protection against erosion	7
Ground water protection / Nitrogen conservation	8
Humus formation	6
Cold- and frost resistance	2
Drought tolerance	7

Type of root	Tuft root with strong main root
Rooting depth	120 cm

Cultivation recommendations:

Recommended sowing rate	20 - 25 kg/ha
Sowing depth	1 - 2 cm
Sowing period	August until early September - depending on location! Early sowing increases control success.
Fertilization	40 - 60 kg N/ha
Crop protection	Usually there is no plant protection required
Sowing method	Low requirements regarding sowing method: spreader or seed drilling
