

#### Benefits:

- Top scorer = resistance level 1, > 90 % reduction of Beet Cyst Nematodes in official testings
- Strong initial development with rich foliage provide an effective ground cover
- Suppression of weeds which could be potentially used as host by nematodes
- Medium-late flowering for a lasting vegetative growing period
- The deep and fine rooting system of **COMET** covers the entire ground volume
- High yield of organic matter which is very important on sandy soils

#### Variety characteristics: (Officially confirmed or respectively in line with Bundessortenamt)

	bad / early / short / low	good / late / long / high / tall
Resistance against <i>Heterodera schachtii</i>	Resistance level 1	
Initial mass formation		6
Tendency to flower	4	
Stiffness		6

## Nematode resistant oil radish

# COMET

### Top effectivity against Beet Cyst Nematodes

#### Usage:

Reduction of Beet Cyst Nematodes  
Green manure  
Ground water protection / Nitrogen conservation  
Mulch sowing  
Humus formation  
Protection against erosion  
Biofumigation

#### Crop rotation suitability:

+ suitable / ++ strongly recommended

Maize	++
Cereals	++
Oilseed rape	+
Sugar beets	++
Potatoes	+
Intensive crops	+
Legumes	++

#### Agronomic features:

bad / early / short / low      good / late / long / high / tall

Weed suppression	9
Protection against erosion	8
Ground water protection / Nitrogen conservation	8
Humus formation	8
Cold- and frost resistance	5
Drought tolerance	7

Type of root	Tap root
Rooting depth	180 cm

#### Cultivation recommendations:

Recommended sowing rate	25-30 kg/ha
Sowing depth	2 - 3 cm
Sowing period	July to early September - depending on location! Early sowing increases successfully the reduction.
Fertilization	40 - 60 kg N/ha
Crop protection	Usually there is no plant protection required.
Sowing method	In order to gain a fast and even development of the oil radish plants, drilling after careful soil preparation is recommended.
