

White mustard

METEX

For biological control of beet cyst nematodes

Benefits:

- Up to 90% nematode reduction (resistance grade 2)
- Intensive growth with early flowering
- Provides protection against erosion and entrainment, maintains nutrients in the topsoil for the subsequent crop
- Safe freezing over winter enables easy mulch sowing of the subsequent crop

White mustard

METEX

For biological control of beet cyst nematodes

Usage:

Green manure
Ground water protection / Nitrogen conservation
Mulch sowing
Humus formation
Protection against erosion

Crop rotation suitability:

+ suitable / ++ strongly recommended

Maize	++
Cereals	++
Sugar beets	++
Legumes	++

Agronomic features:

Type of root	Tuft root with strong main root
Rooting depth	120 cm

Cultivation recommendations:

Recommended sowing rate	20-25 kg/ha
Sowing depth	1-2 cm
Sowing period	August until September
Fertilization	40-60 kg N/ha
Crop protection	Usually there is no plant protection required
Sowing method	Low requirements regarding sowing method: spreader or seed drilling
