oil radish

MINER

Radish-forming oil radish as green manure

Benefits:

- Easy to establish due to the rapid initial development

- **MINER** forms strong radishes, which improve the soil structure and increase the infiltration capacity of the soil

- The improved air and gas balance of the soil leads to rapid soil heating in the spring - early sowing of the following crop are made possible

- Valuable humus binds freely available nitrogen in autumn and activates the soil life

- Freezing off cover crop

- Excellent for reduced tillage

- Very good as a component in blends

Variety characteristics: (Officially confirmed or respectively in line with Bundessortenamt)

	bad / early / short / low	good / late / long / high / tall
Initial mass formation		7
Tendency to flower		6
Stiffness		6

oil radish

MINER

Radish-forming oil radish as green manure

Usage:

Green manure
Ground water protection / Nitrogen conservation
Mulch sowing
Humus formation
Protection against erosion

Crop rotation suitability:

+ suitable / + + strongly recommended

Maize	++
Cereals	++
Oilseed rape	+
Sugar beets	
Potatoes	
Intensive crops	
Legumes	++

Agronomic features:

	bad / early / short / low	good / late / long / high / tall
Weed suppression		7
Protection against erosion		6
Ground water protection / Nitrogen conservation		6
Humus formation		6
Cold- and frost resistance		4
Drought tolerance		6

Type of root	Tap root - radish forming
Rooting depth	180 cm

Cultivation recommendations:

Recommended sowing rate	6 - 8 kg
Sowing depth	2 - 3 cm
Sowing period	End of July to end of August - depending on location!
Fertilization	40 - 60 kg N/ha
Crop protection	Usually there is no plant protection required.
Sowing method	In order to gain a fast and even development of the oil radish plants, drilling after careful soil preparation is recommended.
